

THE POWER OF [E]MOTION.

Movement is our drive. Here, we mean more than just supplying automotive spare parts in top OEM quality. We're on the move for you. With new ideas, product innovations and a passion for service. As your partner, we support you with specific solutions to meet your requirements – from basic orders to individualised consultation on our product range.

Each product from Flenor Automotive not only complies with OE specifications, but also has to meet our own strict quality standards.

And you can rely on that. And on our fair prices.

STEERING AND SUSPENSION PARTS

We have an extraordinarily breadth to our range: apart from drag links and tie rod ends we also supply rubber-metal parts, stabilizers as well as complete repair kits in top quality for a vast range of vehicle types. Furthermore, our program is being constantly extended. Almost all our production sites comply with VDA 6.1 and TS16949.

Facts that speak for themselves – and for us.

WHEEL BEARING KITS

The Flenor range offers you more choice! This is because we boast one of the most extensive ranges on the market. Manufactured from high quality steel our bearings are characterised by a particularly long service life. Also as regards complete sets, which, depending on version, contain all components required for assembly, the Flenor range has simply more to offer: **choose from the wide product range!**

DRIVE BELTS

Flenor multi-v and v-belt ranges distinguish themselves by the breadth of range and first-class OEM quality and are made of CR or HSN temperature-resistant rubber compound, depending on the application. We also supply both ranges in EPDM quality. **The superior thermal properties and flexibility of EPDM increase service life.**

BELT KITS

Everything you need under one roof: **The belt kits contain drive belts, tensioners and/or idlers and/or water pumps as well as mounting material and installation instruction.** That means you have everything you need together in the best quality. Tensioners and idlers as well as water pumps can also be supplied individually upon request.

GLOW PLUGS

Flenor GmbH will help you to get ahead – for example with glow plugs that fulfil the most demanding requirements for quality and performance characteristics. **Flenor glow plugs provide for optimum pre-heating, starting and post-heating in diesel vehicles.**

WIPER BLADES

Flenor wiper blades provide clear vision even at extreme weather conditions. Whether standard blade ("ECO" line) or beam blade ("MEGA" line, "GIGA" line) in combination with the wide range of adapter material, Flenor has the perfect solution for various types of vehicles. **Certified to ISO/TS 16949.**

FUEL HOSES

The small diameter, multi-purpose hoses are suitable for all car fuel systems. Their cover and inner tube withstand oil and heat – over a temperature range of – 35 °C to + 125 °C, for short periods even up to + 140 °C. **In addition, the hoses comply with the requirements of the standards SAE J30R7, ISO 4639-2 and DIN 73379.**

WATER PUMPS

Water pumps made for Flenor GmbH are truly in constant motion for you and provide optimal motor cooling through steady circulation of the cooling fluid. In this process, it is of utmost importance to assure an airtight cooling circuit throughout the entire period of operation. This is ensured by a 100% control as early as the production stage. We continuously update our portfolio for you and look forward to your inquiry. **Also available in a Flenor water pump kit.**

GET A WORLDWIDE OVERVIEW!

Flenor GmbH provides a good focus for automotive parts worldwide for all models. The broad range of products includes timing belts, belt kits, tensioners and idlers, water pumps, v- and multi-v belts, steering and suspension parts, wheel bearing kits, glow plugs, wiper blades as well as fuel hoses.

Quality management at two levels has made the company so successful: special attention is not directed just to the products, but also to our services. At Flenor partner-like customer proximity ranges from a national distribution network to the maintenance of foreign representatives in many countries. Added to this is our targeted consultancy with partners and the support provided by competent service teams.

Product quality is measured against an equally high set of criteria: it meets the highest demands – certified to DIN EN ISO 9001 in the best OEM quality.

TAKE US AT OUR WORD.

We support you with first-class service you can rely on. Thanks to our high performance project development and logistics systems we can guarantee you top availability of all products and services. Our advisors can be contacted by phone or via the internet at any time and will attend to your individual needs.

We would gladly put together your own personal information pack or arrange an appointment directly with us.
